

NCE - Providing Virtualised solutions that meet your current requirements, and grow with your business

With the increase in power and performance of the average server over the past few years, it no longer makes sense to run a single server, single application environment. With the advent of server virtualisation, you can now consolidate your existing servers into a virtual world but still keep their functionality.

At NCE we embrace best-of-breed technology and offer a wide range of products from the market leaders in virtualisation. We can supply the latest software and hardware that can help you transform your existing environment into a virtual one.

Our dedicated team of engineers and technical specialists can work with you to provide a solution that meets your requirements. We can work alongside your existing IT department to design and implement your virtualised environment and to migrate your existing servers and applications.

Our virtualisation service is made up of three areas:

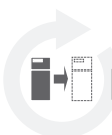

proAssess

Capacity and Performance planning is one of the most important parts of server virtualisation. This is why we offer the **proAssess** service which provides detailed analysis of your existing server estate and shows you how to optimally configure your virtual infrastructure.

proDesign

Once we have good understanding of your existing server estate we can produce a design that details which servers can be virtualised and how they will be distributed across the proposed physical servers. We can propose a design that matches your requirements and ensure that it is flexible, scalable and more importantly cost effective.

proMigrate

Once we have produced a design that meets your requirements we can provide you with a detailed migration plan along with assisting you with the migration itself, ensuring a smooth transition from a physical to virtual environment.

“Not only were the NCE professional services team technically outstanding, they were fully committed and totally dedicated to the task in hand.”
